

Keyword "Psychological Interpretation" in Database Dimensions with Using Bibliometric Techniques

Indi Ariqah Putri Dadi

Department of Al-Qur'an and Interpretation, The Faculty of Ushuluddin
UIN Sunan Gunung Djati Bandung
indiariqah@gmail.com

Abstract

This study aims to discuss psychological interpretation in database dimensions using bibliometric techniques. This study uses a bibliometric approach using the keyword mapping analysis. The study's findings and analysis demonstrate that numerous professionals are still researching and improving the field of psychological interpretation. This study concludes that bibliometric research is very helpful in mapping the development of psychological interpretation research.

Keyword: Bibliometrics; Dimensions; Interpretation; Psychological.

Introduction

The highest and most prestigious position in the science of shari'ah is interpretation. Muslims have always needed this beautiful study to understand the meaning of the Qur'an because it has an object of debate and purpose. In addition, interpretation is one of the efforts made to understand and clarify the motivation behind studying the contents of the verses of the Qur'an. As a country with the largest Muslim population in the world, Indonesia certainly makes a significant contribution to the growth of Islamic studies, especially the study of the Koran. The development of interpretations with various approaches and patterns shows that each interpretation has a unique quality (Zuhdi, nd).

Psychology is the study that investigates how the human mind (consciousness) functions while engaging in motor and cognitive and emotional tasks. In accordance with what has been alluded to regarding the idea that psychology is a scientific discipline which states that the soul itself cannot be seen, what can be seen or seen is behavior or activities which are indications of the life of the soul or its journey.

The results of previous research have been presented by a number of researchers related to psychological interpretation. As far as the author's observation, psychological interpretation has been examined in 3 categories. First, the concept of happiness in the Qur'an from the perspective of Mutawalli Asy-Sya'rawi's interpretation and positive psychology (Sholihah, 2016). Second, the psychology of happiness in the Qur'an (Fuad, 2016). And the third, Interpretation of psychological verses, interprets the verses of the Qur'an about mental resilience and urgency in social life (Mughni, Syafiq, 2022). Of the several categories of psychological interpretation research, no one has examined the mapping of the development of psychological interpretation research in a comprehensive manner.

Psychological interpretation is a subject that has been covered in recent studies and history. While the previous study and the current study have striking differences. While previous studies focused on the psychology of happiness in the Qur'an, this new research offers a complete psychological analysis.

This study aims to discuss the keyword "psychological interpretation" in database dimensions using bibliometric techniques. By including the data that has been researched by the authors, 4 questions can be formulated, namely: a) what research category is the most published in articles on psychological interpretation, b) what is the development per year regarding the publication of articles on psychological interpretation, c) who is the author of the most articles on psychological interpretation, d) what journal publishes the most articles on psychological interpretation.

Interpretation and Psychology

The object of interpretation, a branch of knowledge, is to understand the meaning, law, and wisdom contained in the word of Allah (the Qur'an), which was revealed to the Prophet Muhammad. Interpretation is based on historical and traditional evidence, especially the science of *lughat*, *nahwu*, *sharaf*, *balaghah* science, *ushul fiqh*, and *asbabun nuzul*, as well as *Nasikh Mansukh* (Manna Al-Qattan, n.d.). We can study how things affect a person's interpretation, especially from the psychological or psychological side of the *mufasssir*, as a human being who studies the Word of God, especially in the field of Al-Quran and Tafsir. In this way, we can better understand the pattern or model of interpretation put forward by the *mufasssirs*, which enables us, the students, to understand what the Qur'an means according to the *mufasssirs*. Understanding the meanings of law, wisdom, morals, and other Qur'anic instructions in order to achieve

happiness in this world and the hereafter is the goal of studying interpretation.

Efforts to utilize psychological services in general and Islamic psychology in particular to assist the formation of educational models and practices can be seen as the science of Islamic education with a psychological perspective. The use of these services is demonstrated to properly design educational concepts and practices and to demonstrate their usefulness in achieving educational goals. Psychological studies must be seen as a human effort to understand the various principles, elements, processes, functions, and rules that govern the human soul in order to unlock the mystery of sunnatullah that works on humans (nafsaniyah verses). Islamic psychology is very important in this situation and is very much needed.

Bibliometric Techniques

The quantitative strategy for checking bibliographic information in papers and journals is called bibliometrics. This technique is usually used to map the scientific fields of a journal, investigate references to scientific papers mentioned in the magazine, and categorize scientific articles according to research areas. This approach applies to the study of social grouping as well as the humanities, communications, and marketing. The citation analysis approach and the co-citation analysis approach are used in bibliometric analysis to determine the number of times a particular work is cited by other works.

We need software to use as an analytical tool to examine bibliometric data. Histcite software is a tool that can simplify the analysis of bibliometric data. With the help of this software, you can identify influential authors, view graphs of research papers over the years, and identify research-intensive organizations. With the advantages offered, the data generated by Histcite can be used as a basis for expanding studies in several fields of science, especially those that are still not widely studied. The information produced by Histcite can also be utilized in an academic setting to show readers and reviewers that the issues presented in this research are important for debate.

Dimensions Database

Dimensions is a "research related knowledge system" (database) bringing multiple types of content into one place to enhance global discovery and analysis. The dimension incorporates channels for identifying research reference sources, publications with statistical value,

and multiple data publications that connect to diverse research environments. To meet the demands of research organizations, Dimension aims to offer a state-of-the-art research publication data platform, lower costs and barriers to access research data, and provide a platform for clear and relevant measurement (statistics). "Open/closed" access status of research works related to Dimension 9.

Research Methods

This study uses a bibliometric approach using the keyword mapping analysis using bibliometrics. To find the necessary research trends, topics and keywords, publications relevant to the scope of the research were reviewed using bibliometric analysis. This bibliometric analysis reviews the scientific literature and analyzes trends in Psychological Interpretation and subject methods.(B. Gupta M & S. Bhattacharya, n.d.). To better understand an object, in this case Psychological Interpretation mapping, specialists use bibliometric maps.(Furner, 2002).

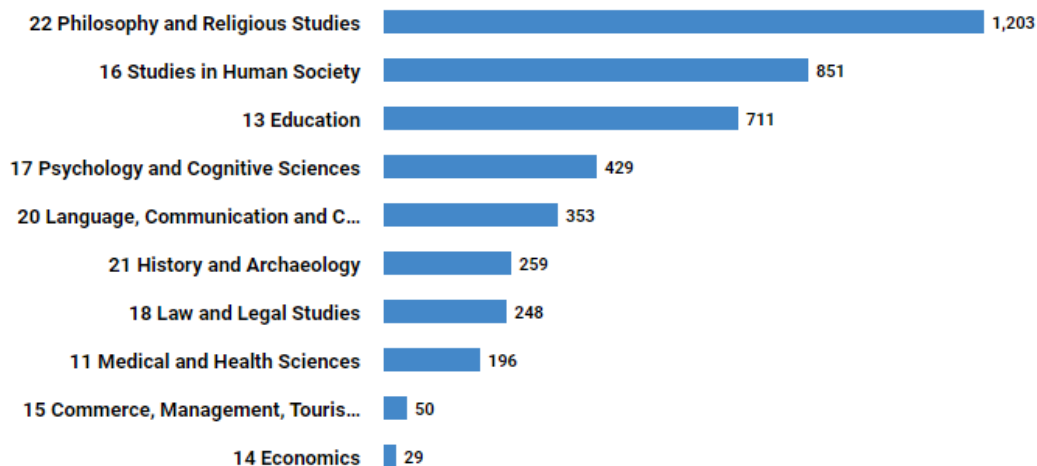

In this study, there were five processes carried out, namely selecting keywords, searching data, selecting articles, validating data, and analyzing data. The selection of keywords was carried out in accordance with the objectives of this study, namely bibliometric analysis of psychological interpretation research on database dimensions. Therefore, the key word is "Psychological Interpretation." Then, in one day, do a data search on dimensions.ai using those keywords. The data can then be checked and analyzed when the results of tracking data in international publications are selected and approved. Data charts and tables that fall into several categories, including the most published articles, the development of interest in writing articles, the development of publications per year, and the number of articles published by theme on which Psychological Interpretation focuses. studies, used for selection and validation. The categorization is then examined based on the importance of this article.

Results and Discussion

1. Research Categories in Article Publications Regarding Psychological Interpretation

Lots of people are interested in researching to the point of writing articles on the theme "psychological interpretation." Researchers also often conduct research in various categories. The authors often use a type of qualitative method in their research. According to the database dimensions, there are 16 research categories that have been studied.

Table 1. Research categories

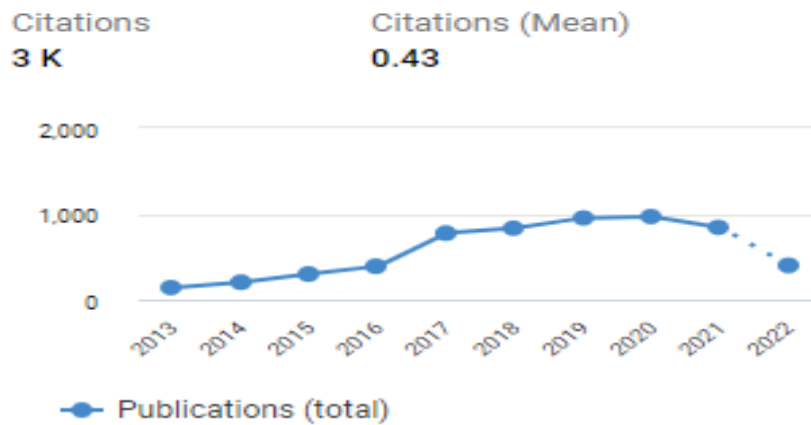

In the keyword "psychological interpretation" there are top 10 Research Categories. In first place with a total of 1203 publications there are 22 philosophy and religious studies, in second place are 16 Studies in Human Society with a total of 851 publications. in third place are 13 Education with a total of 711 publications. Then, in fourth place, there are 17 Psychology and Cognitive Sciences with a total of 429 publications. In fifth place are 20 Language, Communication and Culture with a total of 353 publications. In sixth place are 21 History and Archeology with a total of 259 publications. Then in seventh place there are 18 Law and Legal Studies with a total of 248 publications. In eighth place are 11 Medical and Health Sciences with a total of 196 publications. Then in ninth place there are 15 Commerce. Management. Tourism and Services with a total of 50 publications. And finally there are 14 Economics with a total of 29 publications.

2. Publication Development (Overview) Concerning Psychological Interpretation

Every year there must be a lot of people who publish their work in the form of articles. The publication of this article aims to deepen the author's understanding of the knowledge he has, it can also be used as a final preparation exercise or portfolio if we are students, and articles are also a mandatory requirement for becoming academics or lecturers.

Table 2. Development of publications

The object that I study is about "psychological interpretation". In this study the first publication was conducted in 2013 with a total of 139 publications. Then, the following year publications experienced a significant increase, but a sharp increase from 2016-2017 with 388 publications to 775 publications. From 2017 to 2020 publications experienced a steady increase. Until the last 1 year, publications on psychological interpretation research have decreased from a total of 845 publications to 408 publications.

3. Researchers with the Most Active Role (Researchers) Concerning Psychological Interpretation

Writing articles is one of the objects to channel the knowledge we have, moreover we are academics. The authors of articles on the word "Psychological Interpretation" themselves are mostly academics. See table below for further explanation.

Table 3. Researchers who play an active role

Name	Publications	Citations
Santi Rahmawati	27	2
Sutarman Sutarman	10	1
Endin Mujahideen	9	8
Age of Arroisi	9	3
Enung Asmaya	9	1
Suyadi Suyadi Suyadi	8	17
Mohamad Muslih	7	5

Said Mansir	7	12
Umiarso Umiarso	7	1
Idi Warsah	7	15

Researchers who appear in the psychological interpretation category have several names of researchers sorted by the number of publications. In first place is Santi Rahmawati with a total of 27 publications. Then the second one is Sutarman Sutarman with a total of 10 publications. In third place is Endin Mujahidin with a total of 9 publications. Then in fourth position is the Age of Arroisi with a total of 9 publications. And the last one is Enung Asmaya with a total of 9 publications.

4. Places of Publication (Source Titles) that Dominate Publications Regarding Psychological Interpretation

A journal is a place to publish scientific writings that contain articles and are made by people who are competent in their fields, and are usually published by an agency or institution. Some journals that dominate the publication of articles, especially on the word "Psychological Interpretation." See table below for further explanation.

Table 4. Place of publication

Name	Publications	Citations
Journal of Islamic Education	57	35
Musāwa Journal of Gender and Islamic Studies	53	9
ISLAMICA Journal of Islamic Studies	49	27
Advances in Social Science, Education and Humanities Research	46	17
mutawatir	43	20
Theosophy Journal of Sufism and Islamic Thought	41	12
KOMUNIKA Journal of Da'wah and Communication	40	8
Al-Fikra Islamic Scientific Journal	39	6
MAGHZA Journal of Al-Qur'an Science and Tafsir	36	8
ULUL ALBAB Journal of Islamic Studies	33	9

Based on research that examines psychological interpretation, there is Source Research. In the first place is the Journal of Islamic Education with a total of 57 publications and 35 Citations. Then in second place is the Musawa Journal of Gender and Islamic Studies with a total of 53 publications and 9 citations. The third one is ISLAMICA Journal of Islamic Studies with a total of 49 publications and 27 citations. In fourth place are Advances in Social Science, Education and Humanities Research with a total of 46 publications and 17 citations. Then in fifth position is Mutawatir with a total of 43 publications and 20 citations. Sixth is in order Theosophy Journal of Sufism and Islamic Thought with a total of 41 publications and 12 citations. Then the last one is there KOMUNIKA Journal of Da'wah and Communication with a total of 40 publications and 8 citations.

Conclusion

The research discussed in this paper reflects the exploratory findings of psychological interpretation research. This study looks into publications, researchers, areas of research, and trends in psychology interpretation research. The results of the research show that the study of psychological interpretation is still developing and being studied by many experts. In the research category, the dominant psychological interpretation is researched in the field of Philosophy and the Study of Religions. Trends in the development of psychological interpretation research tend to increase every year with the highest number of studies in 2020. There are no dominant researchers and even tend to be even in terms of the number of publications, namely at most 27 publications, such as Santi Rahmawati, Sutarman Sutarman and Endin Mujahidin. Places of publication for research on psychological interpretation are dominated by the Islamic Education journal and Musawa, the journal of gender and Islamic studies. This study certainly has limitations, for example the database used still uses one database so the results cannot be generalized to all research on psychological interpretation in general. Therefore, it is hoped that in the future there will be more comprehensive follow-up research, for example using other databases such as Google Scholar, Scopus, Web of Science and others.
